1 l3pdffield-checkbox Introduction

This is the documentation for checkbox fields, for general information about form fields check the documentation l3pdffield.

Please keep in mind

- Not every PDF viewer supports checkboxes.

- The handling can depend on settings in the PDF viewer. In adobe reader for example I had to disable an option to avoid that it tries to create an appearance itself

- Standards like pdf/A disable features of form fields too (as you typically can't change the PDF).

2 Checkboxes

Click me:

2.1 Commands

`\pdffield_checkbox:n`   `\pdffield_checkbox:n{⟨key val list⟩}`

This creates a checkbox to check and uncheck. The list of allowed keys is described below. The ⟨key val list⟩ should at least set the name, without it the default name `checkbox` is used. Checkboxes with the same name belong to the same field and are checked and unchecked together. The default appearance is a quadratic frame with a `\texttimes` in it for the checked case. The default appearance is setup at the first use and will use the font family active at that time.
